

# The Future is Flexible

Our data centers are designed to evolve with your business and requirements.

*Welcome to the Fifth Industrial Revolution, where a new breed of adaptive data center is required to address the unpredictable demands of an omniconnected world. Our efficient, adaptive and patented platform is used by industry leaders to deliver their critical services on a global scale.*

## Who Are We?

**Innovative thinkers. | Creative problem-solvers. | Your trusted partners.**

We're the most responsive and agile data center company on the market. Aligned's adaptive and sustainable approach to data centers has transformed the industry. Speed-to-market, creative land and power solutions, energy and water efficiency, and the ability to seamlessly scale our infrastructure are just a few reasons why the world's largest hyperscale and large enterprise customers choose to work and grow with Aligned.

## Why We're Different

### HYBRID COOLING

Air, liquid, or a hybrid of both, our cooling systems and turnkey designs enable seamless scaling from 3 to 300kW per rack.

### EXPAND ON DEMAND

Flexible design and a standardized delivery process with a seamless path for migration from air, to hybrid, to liquid cooling done in a live environment—available today. No need for large-scale retrofits in existing data halls to accommodate the move to liquid.

### SPEED TO MARKET

A power-first philosophy, strategic land acquisition, and robust supply chain help reduce time-to-market for our customers.

### CAPITAL STRENGTH

Strong, stable capital stack delivers more creative deal structures, and the land, power, and equipment to help our customers scale quickly and effectively, where and when they need to.

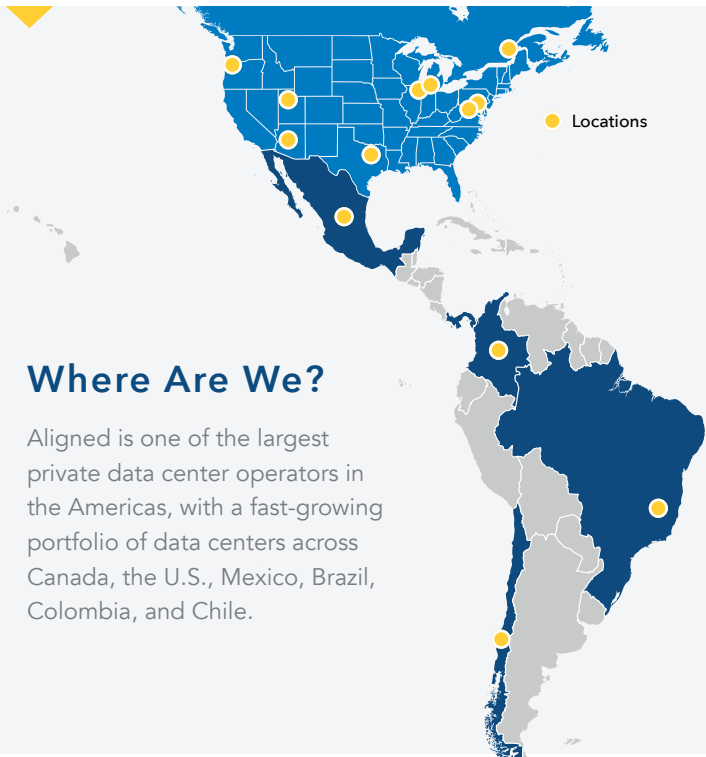

### SUSTAINABILITY

100% of Aligned's power is renewable. From industry-leading PUEs, to carving a pathway to zero waste construction and supply chain decarbonization, using 0 water in the data hall and carbon tracking, to land reclamation, we are the industry's leading change agent for sustainability.

### STRATEGIC SUPPLY CHAIN

Critical, long-lead finished goods built ahead of construction need by trusted manufacturers in the U.S., Canada, and Mexico. Prefabricated, factory-built and tested equipment for improved time-to-market.

## Where Are We?

Aligned is one of the largest private data center operators in the Americas, with a fast-growing portfolio of data centers across Canada, the U.S., Mexico, Brazil, Colombia, and Chile.

## What Do We Offer?

### BUILD-TO-SCALE DATA CENTERS

- Scalable build and design options
- Operations and deal structure flexibility
- Purpose-built and delivered on-demand within customer-requested region
- Aligned or customer-owned, installed, and operated power and cooling infrastructure (MEP)
- Client-managed utilities and facility security

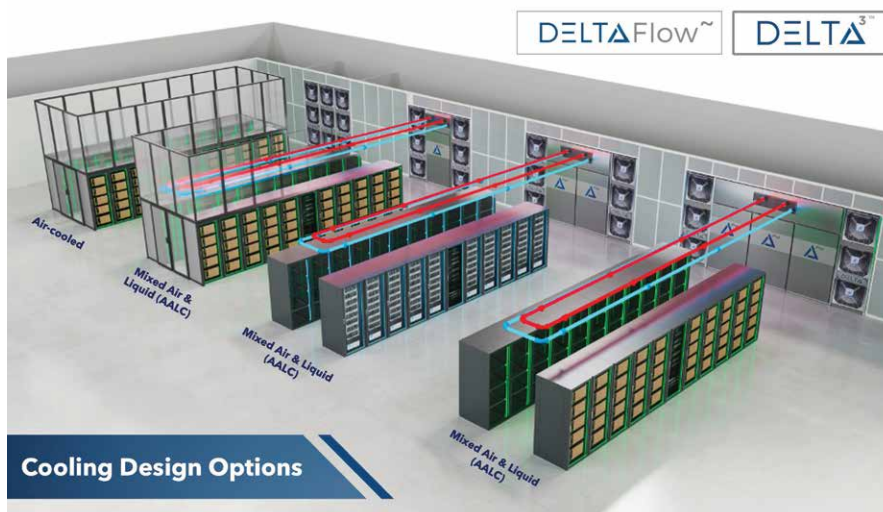

### SCALE DATA CENTERS | MANAGED WHOLESALE COLOCATION

- Adaptive data centers delivered at maximum speed
- Flexible leasing terms
- Aligned-owned, installed and operated power and cooling infrastructure (MEP)
- Single or multi-tenant facility
- Aligned-managed utilities and facility security

## Decade of Cooling Innovation & Expertise

We've been innovating cooling technologies for more than a decade to help transition customers from air to liquid cooling or hybrid cooling environments with proven, turnkey cooling solutions. We work closely with customers, and server and chip manufacturers to stay ahead of the curve and help customers be ready for what's now, and what's next.

The GPU and TPU clusters essential to running AI, HPC, and ML / DL applications require massive processing power, pushing densities far beyond the average kW per rack. Our scalable infrastructure and flexible air (Delta<sup>3</sup>) and liquid (DeltaFlow™~) cooling technologies are designed to meet the increased density requirements and rising temperatures of these next-generation technologies.

### ABOUT ALIGNED

Aligned Data Centers is a leading technology infrastructure company offering innovative, sustainable, and adaptive Scale Data Centers and Build-to-Scale solutions for global hyperscale and enterprise customers across the Americas. Our intelligent infrastructure allows densification and vertical growth within the same footprint, enabling customers to scale up without disruption, all while maintaining industry-leading Power Usage Effectiveness (PUE). By reducing the energy, water and space needed to operate, our data center solutions, combined with our patented cooling technology, offer businesses a competitive advantage by improving sustainability, reliability, and their bottom line.
